

PP O'Connor - Wrexham Police Station, Welsh Water

Construction of a new £21.5m police station in north Wales started at the start of 2017

The "eco-friendly" station is being built on the site of a former warehouse in Llay, near Wrexham, and will include energy-saving features designed to reduce running costs.

Tracey Concrete supplied the Precast Drainage to the project including several Bespoke Flow Control Chambers. Designed to delay the flow of storm water during periods of heavy rainfall, Tracey Concrete's flow control chambers are the perfect SuSDs solution.
